

Be one replaceable call-out

	THE BUYER'S STACK EXPECTS	THE PRODUCT SHOULD OFFER
L1 Models	Two vendors, pinned, via its own cloud route	No hidden model: bundled open weights or the customer's accounts
L2 Inference	A common model API through the gateway	A configurable endpoint and key
L3 Orchestration	Deterministic workflows that retry safely	Idempotent calls; a typed outcome, errors distinct from blocks
L4 Tools	Every tool behind the governed tool gateway	An agent-facing interface with authorisation enforced
L5 Memory	Memory last; erasure by subject	Stateless by default; erase and export by subject
L6 Stores	Entitlement-filtered, rebuildable indexes	The filter inside the search; rebuild from source
L7 Retrieval opt.	Pinned embed and rerank versions	Model version on every vector; customer-pinnable
L8 Ingestion	Access rights and lineage on every chunk	Preserve access metadata; emit lineage and a parse manifest
L9 Evaluation	One telemetry spine; datasets in source control	Spans to the customer's collector, pinned, no content
C1 Gateway	One gateway of record; detectors as call-outs	A fast call-out with a published latency budget and timeout
C2 Guardrails	Firm-owned policy and test sets	Policy as files; the customer's tests run in its CI
C3 Privacy	One privacy service, six enforcement points	Call the customer's service; redact your own logs
C4 Identity	Workforce directory; agents act for users	Single sign-on, provisioning, roles; workload identity
C5 Configuration	Source control as the configuration of record	Policy and settings as code; nothing console-only
C6 FinOps	Cost per approved task; budgets fail closed	Usage per use case in an open cost format
C7 Security	Signed, pinned supply chain; secrets in its vault	Signed images, a component list, no standing secrets
C8 Governance	Firm-owned evidence store, keyed by trace ID	Verdict records in the customer's store, its trace ID

THE SINGLE TEST

The buyer runs its evidence pack with the product in the path, and removes it by changing one gateway route and one manifest entry

THREE FORMS, ONE BUILD

shared service in region · private-endpoint service · container in the customer's account
