

Firm-owned policy and one evidence store, around every call

- C1 AI traffic gateway**
model, tool and agent calls · in region · fails closed

C2 Guardrails
policy and test sets owned by the firm

C3 Privacy service
one API at six enforcement points

C4 Identity & authorisation
every agent a registered identity; deny by default

C5 Configuration of record
prompts, pins and tool lists in Git

C6 AI FinOps
cost per task; budgets fail closed

C7 AI security
secrets, supply chain, capability separation

C8 Model risk, governance & evidence store
immutable, keyed by trace ID

L1 Foundation-model portfolio

two unrelated mid-tier vendors small tier self-hosted open-weight every version pinned

L2 Inference & model access

primary cloud's model service, in region serving engines (vLLM exit route)

optimisation (own GPUs only)

L3 Orchestration: workflows & agents

workflows (default) bounded agent steps durable runtime approval gates

L4 Tools & connectivity

tool-governance sub-layer MCP · OpenAPI · A2A read-only tools for authoritative data

L5 Memory service

governed logical component of L6 write gate · erasure by person built last

L6 Retrieval, knowledge & memory stores

derived, rebuildable index entitlement filter inside the search hybrid search

L7 Retrieval optimisation

embed + rerank + fusion versions pinned in C5 retrieval evaluation gate

L8 Ingestion & data preparation

ingestion control envelope ACLs, classification, lineage replaceable parsers

L9 Evaluation & observability

firm OpenTelemetry collector CI and online evaluations

two red-team tools, one vendor-independent human-edit capture

policy, identity,
configuration, guards

applied to every layer

evidence: traces,
evaluations, approvals

to the C8 evidence store ·
L9 and C8 are one
evidence plane with two
owners
