

Tenant-aware, metered and sold

THREE LAYERS WHOSE ADVICE CHANGES MOST

L1

Models

Uptime: discount tiers can fail under load, and one tenant's misuse can suspend the service

FS

A second vendor, mainly as a regulatory exit route

TS

A second vendor as a live capacity route: warm, sized for real traffic, drilled

L6

Retrieval stores

Isolation is the product's promise; shared caches and indexes can leak context

FS

Entitlement filters inside one firm

TS

Tenant isolation, pooled, bridged or siloed; filter injected from the token, never the prompt

C6

AI FinOps

Margin: every call is cost of goods sold

FS

Cost per approved task, reported

TS

Gross-margin control: cost per call per tenant against price; batch, caching, a small tier

WHAT STAYS

Gateway of record (now with per-tenant keys and budgets) · day-one evaluation · approval-gated workflows · configuration in source control
