

Run where the customer runs

THREE LAYERS WHOSE ADVICE CHANGES MOST

L1

Models

Hosted versions live for months; support periods run for years

FS

A two-vendor portfolio through the primary cloud

SW

A published support matrix: the customer's own model account, plus one bundled open-weight model you may redistribute

C1

Gateway

The vendor does not run the estate

FS

One firm-owned gateway of record

SW

Routed by the customer's gateway: one endpoint setting, a common model API

C7

Security

The vendor is a manufacturer, liable for what it ships

FS

Protect one estate: mirror, pins, scanning

SW

Sign, list and patch every shipped copy for the support period; a redistribution gate in CI

OWN A RELEASE PLANE, NOT A CONTROL PLANE

Deterministic workflows with one bounded model step · retrieval inside the product's own permissions · evidence exported to the customer's tools

CORE CANDIDATES
