

Firm-owned policy and one evidence store, around every call

model, tool and agent calls · in region · fails closed

policy and test sets owned by the firm

one API at six enforcement points

every agent a registered identity; deny by default

prompts, pins and tool lists in Git

cost per task; budgets fail closed

secrets, supply chain, capability separation

immutable, keyed by trace ID

two unrelated mid-tier vendors small tier self-hosted open-weight every version pinned

primary cloud's model service, in region serving engines (vLLM exit route)

optimisation (own GPUs only)

workflows (default) bounded agent steps durable runtime approval gates

tool-governance sub-layer MCP · OpenAPI · A2A read-only tools for authoritative data

governed logical component of L6 write gate · erasure by person built last

derived, rebuildable index entitlement filter inside the search hybrid search

embed + rerank + fusion versions pinned in C5 retrieval evaluation gate

- ingestion control envelope
- ACLs, classification, lineage
- replaceable parsers

firm OpenTelemetry collector CI and online evaluations

two red-team tools, one vendor-independent human-edit capture

applied to every layer
